

Tele Radio launches whole new type of radio remote control.

Gothenburg March 10th 2016

Summary: Tele Radio has updated the Tiger industrial remote control system with a SIL3/PLe rated tablet display transmitter.

The new Tiger tablet transmitter from [Tele Radio](#) is compatible with all existing receivers in the Tiger product family. This new product consists of a tablet control interface combined with our analogue button transmitter TG-T14-7. All combined in a robust shell that unifies the products. The tablet display portion can display crucial system data, camera feeds or present another layer of control interface. The tablet will interface with an existing PLC/PC through Wi-Fi and the built in remote control will connect with the receiver through radio communication. Since our Tiger system is SIL3/PLe certified the user will retain the security that the stop function offers regardless of the status of the Wi-Fi.

Tablet has full freedom of use with any app or web-browser solution available. This means the customer can integrate any previous digital solutions into the tablet controller.

The product will be available in 433 and 915 MHz and with Apple and Android app platforms.

The Tiger Tablet will be introduced at the Bauma fair in Germany starting April 11th.

About Tele Radio

Tele Radio develops, manufactures and markets radio control systems for industrial use. The company was founded in Lysekil in 1955 and has since developed into an expansive group, the Tele Radio Group. The head office is situated in Askim just outside of Gothenburg and there are several subsidiary companies in Europe, the USA and in Asia. In addition to our subsidiary companies we also cooperate with our dealers and partners all over the world.

The research and development of all our products is done by Tele Radio. With more than 60 years of experience we have solid knowledge and experience of radio control systems. Our mission is to "never say no" when it is at all possible to satisfy your needs; our goal is to offer a radio control system for your specific application. We reach these goals by making all our employees actively be part of the process and take responsibility for their respective areas of work.
